Overview

Sinjab is a Saudi sports booking application designed to simplify the process of finding, booking, and managing padel and other sports courts across various cities in Saudi Arabia. The platform enables players to create and join matches, choose between public or private games, and complete payments online using secure methods such as Apple Pay or Mada.

Booking Module

```
public class Booking {

    @FutureOrPresent
    private LocalDate date;

    @NotEmpty
    @Pattern(regexp = "[A-Za-z]+$", message = "please enter a valid city name")
    private String city;

    @NotEmpty
    @Pattern(regexp = "[A-Za-z]+$", message = "please enter a valid sport type")
    private String sportType;

    @Pattern(regexp = "^(?:[01]\\d|2[0-3]):[0-5]\\d$", message = "time must be in HH:mm format (00:00 - 23:59)")
    private String time;

    @NotNull
    @Min(30)
    @Max(120)
    private int durationMinutes;

    private boolean publicStadium;

    @NotEmpty
    private String courtName;

    @Min(value = 2, message = "must have at least 2 players")
    private int maxPlayers;
}
```

Payment Module

```
public class Payment {  
  
    @Positive(message = "amount must be a positive number")  
    private double amount;  
  
    @Pattern(regex = "[A-Za-z0-9]*$", message = "discount code should have only letters or numbers")  
    private String discountCode;  
  
    @NotEmpty(message = "please enter payment method")  
    @Pattern(  
        regexp = "^(Mada|ApplePay|CreditCard|Cash)$",  
        message = "payment method must be Mada, ApplePay, CreditCard or Cash"  
    )  
    private String paymentMethod;  
    // add feature  
    private boolean isRefund;  
}
```

Court Module

```
public class Court {

    @NotEmpty(message = "please enter court id")
    @Size(min = 3, max = 10, message = "court id should be between 3 and 10 letters")
    private String courtId;

    @NotEmpty(message = "please enter court name")
    @Pattern(regex = "^[A-Za-z0-9 ]+$", message = "court name can only have letters and numbers")
    private String courtName;

    @NotEmpty(message = "please enter location")
    @Pattern(regex = "^[A-Za-z ]+$", message = "location should only have letters")
    private String location;

    @NotEmpty(message = "please enter sport type")
    @Pattern(regex = "^[A-Za-z]+$", message = "sport type should only have letters")
    private String sportType;

    @NotNull(message = "choose if the court is indoor or not")
    private Boolean isIndoor;

    @Positive(message = "price must be more than 0")
    @Max(value = 500, message = "price can't be more than 500")
    private double hourlyPrice;

    @NotNull(message = "please select if the court is available or not")
    private Boolean available;
}
```
